3. The types 43 A and B submachine guns and the type 48 automatic rifle were manufactured in Brno only until 1948. Source does not know where these weapons were produced after 1948. The type 37 heavy machine gun was produced in Brno only until the end of the war. Later these guns were produced in Vsetin (P 50/O 43). In 1947, source was in Vsetin to train personnel in weapons testing. Source also trained personnel in Povazska Bystrica (Q 50/O 71). In September 1950, when source had to leave, the Brno-Zabrdovice plant was producing only type 24 rifles and type 26 light machine guns. \*
4. The tested weapons were either taken by the Czechoslovakian Army or the SNB, or were sent to the arms depot. In 1946, the following weapons were tested in the presence of foreign commissions: 20,000 type 24 rifles, destined for Rumania; 12,000 type 24 rifles, destined for China, and type 24,8,000 rifles, destined for Abyssinia.
5. In the summer of 1950, the civilian production consisted of type-writers, scales, kitchen utensils and especially the Zetor 25 tractor which was scheduled to be replaced by the heavier Zetor 35 type in early 1951. However, the entire tractor production was later to be transferred to the former branch plant of the Zbrojovka Brno in Brno/Lisen (P 50/N 40).
6. The Brno-Zabrdovice plant had 10,000 to 12,000 employees in the fall of 1950. Work was done in three shifts. Most workers were employed in the morning shift. The manager of the plant at that time was engineer Mach (fnu).
